

Abstract of the Invention

The vaginal cleansing swab is utilized by females for cleansing of the vaginal area. The swab consists of an angled applicator shaft with a moisture-absorbent end piece on one end comprised of a dome-shaped tip and three disc-like portions, having a
5 convex cross-section and with the outer diameters of the disc-like portions increasing in size toward a dome-shaped tip. The design of the vaginal cleansing swab provides for easy insertion into and cleansing of the vaginal area.
